THE SCIENCE AND PHILOSOPHY BEHIND GLOWBOOST

GlowBoost combines Hyaluronic Acid (HA) with Poly-L Lactic Acid (PLLA) in a professional injectable formulation designed around two complementary aesthetic principles: immediate hydration and long-term biostimulation.

HA restores hydration and improves skin quality, while PLLA supports collagen production, helping to enhance skin structure, firmness and elasticity over time. Together, they create a powerful synergy for natural, progressive and long-lasting results.

THE FORMULA

HYALURONIC ACID

Hydration is fundamental to healthy-looking skin. Hyaluronic Acid has a remarkable capacity to bind and retain water, helping to support moisture balance, softness and suppleness. Within GLOWBOOST, HA provides the hydration-focused component of the formulation, helping to improve the appearance of dehydrated, tired-looking skin and contributing to a smoother, fresher finish.

POLY-L-LACTIC ACID (PLLA)

PLLA is a biodegradable synthetic polymer with an established role in regenerative aesthetics. Its key interest lies in biostimulation: after administration, PLLA can promote a controlled tissue response associated with fibroblast activity and new collagen formation. This makes it particularly relevant where the treatment objective is progressive improvement in skin structure, firmness and quality rather than hydration alone.

A COMPLEMENTARY APPROACH

By bringing HA and PLLA together, GLOWBOOST is positioned around two distinct but complementary actions. HA supports hydration and immediate skin quality, while PLLA provides a longer-term collagen-stimulating dimension. The combination is intended to support a more hydrated, refined and resilient-looking complexion over time.

HOW GLOWBOOST WORKS

TWO COMPLEMENTARY ACTIONS. LASTING RESULTS.

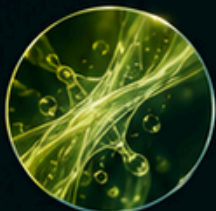

GlowBoost combines Hyaluronic Acid and Poly-L-Lactic Acid (PLLA) in a **3% concentration** to work in synergy, delivering immediate hydration and long-term regenerative support for visibly healthier, firmer and more radiant skin.

HYALURONIC ACID (HA)

HYDRATION & SKIN QUALITY

Attracts and retains water, restoring hydration, improving skin texture and supporting a smoother, more radiant complexion.

POLY-L-LACTIC ACID (PLLA)

COLLAGEN STIMULATION & REGENERATION

Stimulates neocollagenesis, supporting the skin's natural regenerative processes for progressive, long-lasting improvement in firmness and structure.

PROFESSIONAL USE

GlowBoost is an injectable product intended for professional use by appropriately qualified healthcare practitioners. Patient selection, preparation, injection technique, anatomical placement, volume and treatment intervals should be determined by the practitioner according to the individual's needs and in line with the product's instructions for use.

A complete medical history and individual assessment should be performed prior to treatment. Practitioners should consider relevant contraindications, precautions and potential adverse effects before administration.
