HYAPRONE

High Low Molecular Weight Hyaluronic Acid with PDRN
Regenerative Complex

THE SCIENCE AND PHILOSOPHY BEHIND HYAPRONE

HYAPRONE represents a new era in skin revitalisation by combining two carefully balanced molecular weights of Hyaluronic Acid with a powerful PDRN regenerative complex. The formulation has been engineered to work across multiple layers of the skin, supporting hydration, structure, cellular repair and visible luminosity. Rather than acting through a single pathway, HYAPRONE works through a synergistic multi-mechanism design. Each component has been selected for its ability to support skin quality, improve resilience and promote a healthier, more vibrant complexion. The result is a refined, modern solution that meets the expectations of both practitioners and clients seeking subtle yet meaningful improvement.

A close-up, artistic photograph of a woman's face, focusing on her eye and cheek. She is wearing vibrant pink eye makeup and lipstick. The lighting is soft, highlighting the texture of her skin and the intensity of the makeup. The background is dark, making the subject stand out.

THE INGREDIENTS

Dual-Weight Hyaluronic Acid Technology

Hyaluronic Acid is one of the most essential molecules for skin health. By utilising both high and low molecular weight fractions, HYAPRONE ensures that hydration and revitalisation occur on multiple levels.

High Molecular Weight HA

This large molecular form sits closer to the surface, creating a moisture-rich layer that enhances elasticity and immediately restores suppleness. It contributes to a smoother appearance, helps reduce trans-epidermal water loss and supports the skin's natural protective barrier. Its ability to hold significant amounts of water makes it essential for comfort, plumpness and overall glow.

Low Molecular Weight HA

Smaller in size, this molecule is able to penetrate more effectively, where it encourages renewal processes within the deeper layers. Low MW HA supports extracellular matrix regeneration, helping the skin maintain firmness, density and resilience over time. This deeper activity contributes to improved texture, a more refined appearance and long-lasting vibrancy.

Together, the dual-weight combination delivers a more comprehensive and sophisticated form of hydration and support than singular HA formulations.

PDRN Regenerative Complex

At the core of HYAPRONE lies its PDRN complex, a biologically active component known for its regenerative and restorative properties.

PDRN works by supporting natural tissue repair processes, promoting fibroblast activity and aiding in collagen synthesis. It improves cellular communication, supports microcirculation and helps reduce inflammation, resulting in a healthier and more balanced skin environment. This regenerative action is especially beneficial for skin experiencing early aging, textural irregularities, post-inflammatory concerns or reduced radiance. Over time, PDRN contributes to a stronger, more resilient complexion that retains youthful vitality.

WHO HYAPRONE IS DESIGNED FOR

HYAPRONE is ideal for clients who desire a natural yet noticeable enhancement in skin quality. Typical concerns that benefit from HYAPRONE include:

- Early signs of aging, such as reduced elasticity or loss of radiance
- Fine textural irregularities and superficial lines
- Dull or fatigued-looking skin requiring revitalisation
- Skin that has experienced irritation or post-inflammatory discomfort
- Individuals seeking improved softness, bounce and luminosity
- Clients looking to maintain long-term skin health and prevent early aging

Its versatile design makes it suitable for multiple ages, skin types and lifestyle conditions.

HOW HYAPRONE WORKS: A MULTI-LAYERED MECHANISM

HYAPRONE supports the skin through several complementary pathways:

- Immediate Hydration Boost

Delivers instant elasticity, comfort and plumpness through high molecular weight HA.

- Deep-Level Revitalisation

Low molecular weight HA encourages dermal renewal and extracellular matrix remodelling.

- Collagen and Fibroblast Support

PDRN activates fibroblasts and promotes collagen synthesis, improving firmness and long-term skin architecture.

- Enhanced Microcirculation

The improved cellular environment can support better nutrient delivery, contributing to brightness and radiance.

- Strengthening the Skin Barrier

Hydration plus regenerative support helps defend the skin against stress and environmental factors, maintaining a healthy balance.

APPLICATION TECHNIQUES

HYAPRONE has been formulated to adapt to several delivery approaches depending on the practitioner's preference and the client's specific needs.

Micro-Deposition Techniques

Ideal for precise facial areas, allowing controlled placement and focused improvement.

Uniform Distribution for Overall Revitalisation

Useful for larger areas that require a smooth, even enhancement in texture, hydration and glow.

Targeted Micro-Applications

Suited for areas requiring intensive support, refinement or additional regenerative action.

These techniques allow practitioners to personalise each treatment, ensuring results that look refined, natural and harmonised with the client's features.

- 
- A close-up, profile view of a woman's face, looking upwards and to the left. She has dramatic, shimmering pink and purple eye makeup, including a large, winged eyeliner and heavy eyeshadow. Her lips are painted with a glossy, deep red lipstick. The skin appears smooth and hydrated, with a soft glow. The background is dark and out of focus.
- Dual-weight Hyaluronic Acid for multi-layer hydration
 - PDRN technology to support tissue repair and cellular regeneration
 - Enhanced elasticity, smoothness and softness
 - Refined texture with reduced appearance of superficial lines
 - Improved brightness and overall luminosity
 - Calm, balanced skin with reduced visible irritation
 - Strengthened skin resilience over time
